## Part - VIII

## ASSIGNMENT

Q.1. An automobile dealer wishes to put five repairmen to five different jobs. The repairmen have some what different kind of skills and they exhibit different levels of efficiency from one job to another. The dealer has estimated the number of man-hours that would be required for each job-man combination. This is given in the matrix form as follows :

| Man | JOB |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | P | Q | R | S | T |  |
| B | 9 | 17 | 8 | 16 | 20 |  |
| C | 13 | 7 | 12 | 6 | 15 |  |
| D | 21 | 16 | 15 | 12 | 16 |  |
| E | 14 | 24 | 17 | 28 | 26 |  |

Find the optimum assignment that will result in minimum man - hours needed.
Q.2. CIDCO have decided to carry out repairs of five main roads in the city before the onset of the monsoon. Five contractors have submitted quotations as under. It is the policy of CIDCO to award no more than one contract to one contractor. If the objective of the CIDCO is to minimise the total cost, how should they award the contracts? ( $\mathrm{NQ}=$ No Quotation).
How much expenditure should be budgeted?

| Contractor | ROADWAYS |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 18 | A2 | A3 | A4 | A5 |  |
|  | 17 | 19 | 14 | 25 | NQ |  |
| X3 | 19 | 21 | 13 | 22 | 24 |  |
| X4 | 17 | 22 | 18 | 20 | 26 |  |
| X5 | 14 | 15 | 24 | 27 |  |  |

Q.3. Five salesmen are to be assigned to five districts. Estimates of sales revenue in thousands of rupees for each salesman are given below :

|  | DISTRICTS |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Sales man | A | B | C | D | E |
| 1 | 32 | 38 | 40 | 28 | 40 |
| 2 | 40 | 24 | 28 | 21 | 36 |
| 3 | 41 | 27 | 33 | 30 | 37 |
| 4 | 22 | 38 | 41 | 36 | 36 |
| 5 | 29 | 33 | 40 | 35 | 39 |

Find the assignment pattern that maximizes the sales revenue.

## TRANSPORTATION

Q. 1. Solve the following transportation problem for the optimum cost.

|  |  | To Destination |  |  |  | Availability |
| :--- | :--- | :--- | :---: | :---: | :---: | :---: |
|  |  | $\mathbf{A}$ | $\mathbf{B}$ | $\mathbf{C}$ | $\mathbf{D}$ |  |
| From | 1 | 1 | 3 | 4 | 2 | 50 |
| Origin | 2 | 5 | 3 | 6 | 1 | 70 |
|  | 3 | 8 | 7 | 1 | 2 | 180 |
| Requirement | $\mathbf{5 0}$ | $\mathbf{7 0}$ | $\mathbf{8 0}$ | $\mathbf{1 0 0}$ |  |  |

Q.2. Solve the following transportation Problem :

| Godowns |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | Stock Available |  |
| 1 | 7 | 5 | 7 | 7 | 5 | 3 | 60 |  |
| 2 | 9 | 11 | 6 | 11 | - | 5 | 20 |  |
| 3 | 11 | 10 | 6 | 2 | 2 | 8 | 90 |  |
| 4 | 9 | 10 | 9 | 6 | 9 | 12 | 50 |  |
| Demand | 60 | 20 | 40 | 20 | 40 | 40 |  |  |

There is no route from factory 2 to godown 5 .
Q. 3.

| Factory | Destination |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{( 1 )}$ | $\mathbf{( 2 )}$ | $\mathbf{( 3 )}$ | Supply to be exhausted |
| A | 5 | 1 | 7 | 10 |
| B | 6 | 4 | 6 | 80 |
| C | 3 | 2 | 5 | 15 |
| Demand | 75 | 20 | 50 |  |

Since there is not enough supply, some of the demands at the three destinations may not be satisfied. For the unsatisfied demands, let the penalty cost be rupees 1, 2 and 3 for destinations (1), (2) and (3) respectively.
Find the optimal allocation that minimizes the transportation and penalty cost.
Q.4. The following matrix is a minimization problem for transportation cost. The unit transportation costs are given at the right hand corners of the cells and the $\Delta \mathrm{ij}$ values are encircled.

Find the optimum solution (s) and the minimum cost.

## SIMULATION

Q. 1. A bakery shop keeps stock of a popular brand of cake. Previous experience indicates the daily demand as given here :

| Daily demand | 0 | 10 | 20 | 30 | 40 | 50 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Probability | 0.01 | 0.20 | 0.15 | 0.50 | 0.12 | 0.02 |

Consider the following sequence of random numbers :
R. No. $48, \quad 78, \quad 19, \quad 51, \quad 56, \quad 77,15,14, \quad 68, \quad 09$.

Using this sequence, simulate the demand for the next 10 days. Find out the stock situation if the owner of the bakery decides to make 30 cakes every day. Also, estimate the daily average demand for the cakes on the basis of simulated data.
Q.2. Dr. STRONG is a dentist who schedules all her patients for 30 minutes appointments. Some of the patients take more or less than 30 minutes depending on the type of dental work to be done. The following summary shows the various categories of work, their probabilities and the time actually needed to complete the work :

| Category | Time required | Probability of category |
| :---: | :---: | :---: |
| Filling | 45 minutes | 0.40 |
| Crown | 60 minutes | 0.15 |
| Cleaning | 15 minutes | 0.15 |
| Extraction | 45 minutes | 0.10 |
| Checkup | 15 minutes | 0.20 |

Simulate the dentist's clinic for four hours and determine the average waiting time for the patients as well as the idleness of the doctor. Assume that all the patients show up at the clinic at exactly their scheduled arrival time starting at 8.00 a.m. Use the following random numbers for handling the above problem :

40, 82, 11, 34, 25, 66, 17, 79.
Q.3. A bakery sells a popular brand of bread. Cost price per bread is $₹ 16$ and selling price per bread is ₹ 20 . Shelf life of the bread is 2 days and if it is not sold within two days, then it has no sale value at the end of second day. Daily demand based on past experience is as under:

| Daily Demand | 0 | 20 | 25 | 35 | 40 | 45 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Probability | .01 | .15 | .30 | .40 | .10 | .04 |

Consider the following sequence of random numbers :
$58,80,51,09,47,26,64,43,86,35$
Using the sequence, simulate the demand for the next 10 days and find out the total profit or loss for 10 days assuming 35 breads are purchased every day in the morning and there is an opening stock of 5 breads (purchased the previous day) on the 1st day morning. Assume LIFO basis (Last In First Out basis -where the fresh bread is sold first).
